

What is claimed is:

1. An ink-jet recording sheet comprising a support having thereon a porous ink receptive layer containing a dispersion of an oil-soluble compound,  
wherein the dispersion is prepared by dispersing the oil-soluble compound with at least two nonionic surface active agents differing in HLB value.
2. The ink-jet recording sheet of claim 1, wherein the dispersion further contains a hydrophilic polymer.
3. The ink-jet recording sheet of claim 1, wherein one of the two nonionic surface active agents has a HLB value of not more than 10, and the other one has a HLB value of more than 10.
4. The ink-jet recording sheet of claim 1, wherein the oil-soluble compound contains a plurality of non-aromatic unsaturated carbon-carbon bonds in the molecule.

5. The ink-jet recording sheet of claim 4, wherein the oil-soluble compound is a polymer derived from a butadiene monomer.

6. The ink-jet recording sheet of claim 1, wherein the dispersion further contains an antiseptic agent.

7. The ink-jet recording sheet of claim 1, wherein the porous ink receptive layer further contains inorganic micro particles and a hydrophilic polymer.

8. The ink-jet recording sheet of claim 1, wherein the porous ink receptive layer further contains a cationic polymer.

9. The ink-jet recording sheet of claim 1, wherein the porous ink receptive layer further contains a water-soluble multivalent metal compound.
